BAR Changes Smog Check Technician License Renewal Requirements

By: Wayne Brumett, BAR
Staff

Effective January 1, 2003, the
requirements to renew a Smog
Check Technician license will
change. The new emphasis
for license renewal will be on
continuing education. Techni-
cians whose license expires
January 1, 2003 and later, will
not be required to take the
renewal license examination
administered by Experior
Assessments, BAR's examina-
tion contractor, in order to
renew their license. License
renewal will require techni-
cians to complete BAR's new
update training course, entitled
"Smog Check 2003 Update
Course." The new course will

inform area residents about the impact of this new designation the next time their vehicles require a smog check.

"Prior to our event, most people here didn't know about all of the services provided by BAR," said Bill Malone, a supervisor in the BAR Fresno office. "And very few residents had a concept of what a 'dyno smog test' is and how a dynamometer works. They were pleased that we came to assist with their automotive questions and provide updated information on BAR's programs" Malone added.

BAR staff set up an information booth at the park site to distribute information and talk to participants. An improvised testing center using two portable dynamometers was set up a few blocks from the park at the Dinuba City Hall parking lot. Many participants were interested in learning about the new testing program and the impact it would have on their vehicles. Over 140 vehicles were tested during the two-day event. Most of the participants whose vehicles failed the loaded-mode test were eligible to participate in BAR's repair assistance program. About 50 of the vehicles that failed the test have already been repaired at local repair stations.

"Many motorists who own older vehicles in the largest cities throughout the State have had their cars tested on the dynamometer for their vehicle's biennial smog check," said Malone. "The dynamometer simulates road-driving conditions and analyzes the vehicle's emissions more accurately. Dinuba is in a Partially Enhanced Area now, and motorists will now be required to have their vehicles tested on a dynamometer. The more accurate test may require more local area motorists to have emissions related repairs

on their vehicles," he added.

Tulare County was designated as a Basic Area until May 1, 2002, when it became an Enhanced Area. The difference between the two area designations is the quality of the air and the type of vehicle emissions test that is required. A "Basic Area" under the California Smog Check Program, does not have severe air quality problems as dictated by federal and state law and vehicle emissions testing does not require the use of a dynamometer. Also, vehicles are not directed to test only stations for smog testing. By contrast, an "Enhanced Area" is generally considered to be extremely smoggy, urbanized area that does not meet federal or state air quality standards for ozone and carbon monoxide. In an Enhanced Smog Area, vehicles must be tested on a dynamometer and some vehicles are directed to "test only" stations for their biennial smog check. A Partially Enhanced Area requires the dynamometer testing method, but vehicles are not directed to test only stations. (Diesel-powered vehicles, motorcycles, two-cylinder vehicles, cars with two-cycle engines, electric cars, vehicles with more than a 14,000 pound gross vehicle weight rating, and those powered only by natural gas are exempt from the Smog Check Program).

Malone believes that the BAR community outreach event raised consumer awareness on the importance of working together to clean the air. "That's really the message we wanted to bring," he said. "And judging by the overwhelming response from those who attended, they understood it and want to continue to do their part to help clean the air." ■

BAR Changes (continued)

be available beginning September 1, 2002. Technicians pursuing an initial license must still take and pass the licensing examination administered by Experior Assessments.

Once a technician has taken and passed the update course, he/she must submit an **Application for Smog Check Technician License Form (Form T-6, Rev. 10/99)** along with the \$20.00 application fee to BAR. The application form must list the following information:

- ◆ Date of completion of the new update course **and**
- ◆ Completion date for the required courses in Electrical/Electronics, Engine Performance, and Advanced Engine Performance; **or** expiration dates for the acceptable ASE certifications (A6, A8, and L1)

The BAR Licensing Unit will review the applications within 10 to 14 days of receipt. Within 5 to 7 days after an application has been approved, the Vehicle Information Database (VID) will be updated to show the new license expiration date. Approximately 15 days after the VID update, Experior Assessments will mail a new license and badge which will reflect the most recent photo of the technician that is in their file. Applications from Technicians whose license reflects a Family Support or Enforcement hold will not be approved.

Following is a list of the most **Frequently Asked Questions** regarding the new course:

Q: Who must take this course?

A: BAR will require all licensed Smog Check Technicians, whose license expires after January 1, 2003, to complete this new update training course, prior to renewing their license.

Q: How long is the course?

A: The course is a minimum of 8 hours in length, including the examination. Some schools may choose to conduct a longer course.

Q: Where can I get this training?

A: Any BAR certified school may offer this course. To find a certified school in your area, go to the following web page:

http://165.235.17.9/sandt/schools/query_schools.asp, or call the Consumer Information Center (800) 952-5210. You will need to contact each school directly for a schedule.

Q: What is the cost of the course?

A: The cost of the course is determined by each school. Public schools (i.e. community colleges, ROPs, etc.) are usually lower in price than private training institutions, but private schools often offer a wider variety of choices regarding course hours and days.

Q: What does the new update course cover?

A: The course is designed to address common misunderstandings technicians have regarding the Smog Check program. In addition, the course will cover new material in the Smog Check Inspection Manual (Revision 6). The course will use a BAR-produced video to address common misunderstandings regarding smog inspection procedures. Additionally, the course instructors may conduct group discussions to address problems, and identify questions the technicians have regarding the program. Instructors may contact BAR for answers to questions identified during the course discussion. BAR will make the answer available to all BAR instructors, to aid future training courses.

Q: I heard that if you complete this course, you don't have to take the recertification examination to renew your license, is that true?

A: Yes. If your license expires after January 1, 2003, you will not have to take a licensing examination to renew your license – just fill out an application and mail it in with your \$20 application fee, after you complete your update course.

Q: If my license expires in 2002, can I just take this course and not take the licensing exam?

A: No. All renewal applicants whose licenses expire in 2002, must pass the technician licensing examination administered by Exporior Assessments to renew the license. If your license expires in 2002, you cannot just let it expire and apply for renewal in 2003 without passing a licensing exam.

Q: What does the course's final exam cover, and what is a passing score?

A: The open-book examination (maximum 4 hours) will cover the new Smog Check Inspection Manual (Revision 6), and the BAR Laws and Regulations book. The technician will be asked to find answers to the test questions from both books, and note the page number, or regulation code number, where the answer was found. Technicians who familiarize themselves with the manual, and the Laws and Regulations book, before attending the course, may shorten the time it takes to complete the examination. To pass the examination, technicians must receive a minimum score of 70%.

Q: Can I take a challenge test, instead of taking the new course?

A: No. This course is designed to have technicians participate in classroom discussions to dispel common misunderstandings, and to identify problems associated with performing Smog Check inspections.

Q: My license expires a year and half from now. If I take the update course now, will it meet the requirements when I renew my license?

A: Yes, as with all BAR courses, you will need to apply for license renewal within two years from the date of course completion.

Q: If someone is getting a new license, will they also receive this training?

A: Yes. This same training (along with the previous OBD II update training course) will be incorporated into the new Basic Area Clean Air Car Course, which is required of all new applicants for a Smog Check technician license.

Q: If my license expires in January 2003, can I just take the licensing examination instead of attending the new update course?

A: No. If a technician's license expires in January 2003 (or beyond), they must show proof of completing the new Smog Check 2003 Update Course. Taking the licensing examination is not an acceptable substitute. ■

CONSUMER INFORMATION CENTER

NEW SERVICE MAKES FINDING TEST-ONLY SMOG CHECK STATIONS EASIER

By: **Lana K. Wilson-Combs, DCA Communications and Education Division**

Finding a Test-Only Smog Check station is now a whole lot easier for consumers. In March, the California Department of Consumer Affairs' (DCA) Consumer Information Center (CIC) implemented an automated Zip Code Locator (ZCL) system. With this new service, callers simply dial the CIC Hotline 1-800-952-5210. They are then prompted to enter their zip code. Once they do that, they can get the name, address, and telephone number of three (3), randomly selected Test-Only stations within that zip code. Residents who live in a rural area will get information on three stations within or near that zip code.

"Since we implemented the program on March 17, 2002 we've received a tremendous response from consumers," says Sharon Acquah, CIC's project manager. "They really like the convenience of the service. It seems to take away some of the mystery for them having to find a place on their own and especially one they feel comfortable with."

4 From March to June, the CIC received 36,376 Test-Only Smog Check station locator inquiries. Acquah anticipates that amount will increase within the next two months. But, she says the Center is prepared to accommodate any increased volume. Four to six employees are assigned to ensure the phone system functions properly. These employees are responsible for inputting daily information about various Test-Only Smog Check stations, such as updates on closures of any facilities, additions, changes to station information (which come from the Bureau of Automotive Repair, BAR), or other information consumers may find helpful.

The automated phone system is designed so that if a consumer does not find the information they need after going through the prompts, which generally take only two minutes, they will be transferred to a live agent who will help them.

The need for this automated system came about because of the increase in the number of vehicles directed to Test-Only stations. In the state's smoggiest regions, vehicles likely to be high-polluting are directed to Test-Only stations for their initial smog checks. These stations are licensed by the state to only perform tests on vehicles. They are prohibited from performing any repair services.

"This is another example of DCA working to ensure we provide consumers with information they want and need," says Acquah. "It is a good service, and we're always looking at ways to make it even better."

Editor's Note: If a directed vehicle fails at a Test-Only station, specified Gold Shield stations can provide state financed repair assistance. They can also retest and certify the vehicle without having to return to a Test-Only station. For more information, call the Consumer Information Center Hotline at 1-800-952-5210. ■

Tijuana, Mexico Gears Up For Vehicle Emissions Inspection Program

By: Lana K. Wilson-Combs, DCA Communications and Education Division

Plans to implement a Vehicle Emissions Inspection program in Tijuana, Mexico has shifted into high gear. On April 16, 2002, Tijuana Mayor Jesus Gonzalez-Reyes sent three of his city's top fleet technicians—Domingo Alejandro Mojica Talacon, Gamaliel Soto Lugo, Sergio Eduardo Ramirez Neri—to an extensive three day emissions inspection training course at the Bureau of Automotive Repair (BAR) headquarters in Sacramento, Calif. Several other dignitaries made the trip as well, including Paola Navarro, Assistant Director of International Relations and assistant to Mayor Gonzalez-Reyes, O.C. Juan Villarreal Camarena, *Coordinador de Vinculación*, C. Armando Perez Castaneda, Chief of Fleet Services for Security and Jose Alfredo Angulo Ibarra, who is the Chief of Ecology and Environmental Services for the City of Tecate. They toured BAR's facilities and learned about the Department's innovative Smog Check program which has set the standard for the United States and other countries.

The objective of the training course, which was taught by BAR's Wayne Brumett, was to provide classroom instruction as well as hands on laboratory experience that would enable the technicians to successfully perform various automotive procedures such as a two-speed idle (i.e. BAR 90) smog inspection, and pass/fail decisions for the inspection. Successful completion of the courses required the technicians to perform the following:

- A visual inspection of all required emission control systems.
- A functional test of the base ignition timing.
- A functional test of the exhaust gas recirculation (EGR) system.
- A functional test of the malfunction indicator lamp system.
- A sampling of tailpipe emissions, and a determination whether these readings meet or exceed acceptable standards.

These are valuable skills Tijuana's technicians will need to have as they prepare to implement their emissions program.

Since taking office last year, Mayor Jesus Gonzalez-Reyes has worked diligently to make the Vehicle Emissions Inspection Program a reality. During a visit to BAR in February 2002, Mayor Jesus Gonzalez-Reyes expressed his gratitude to BAR for its assistance. Within the last two years, BAR has provided Smog Check consultation to Tijuana and has held a series of training and inspection sessions for city officials. The joint partnership between California and Mexico is part of Gov. Gray Davis' ongoing efforts to ensure both sides of the border maintain good air quality. It is also part of a pact that the City of Tijuana and the State of California, including Cal/EPA, Department of Consumer Affairs/Bureau of Automotive Repair (DCA/BAR) and Air Resources Board (ARB) made last May to assist with the development of the Pilot-Scale Vehicle Emissions Inspection program.

"The entire event was well received, said Brumett. "We were really pleased with how quickly the participants learned and grasped the concepts of vehicle emissions inspections. We also benefited by having representatives from ARB's Heavy Duty Diesel Enforcement Section such as Darryl Gaslan and Damacio Arevalos on hand to facilitate a portion of the course. Overall, we believe the important information the technicians learned from these training sessions will be put to good use as they work to implement their program." ■

REFEREE CORNER

In September 2001, the San Joaquin Valley Air Pollution Control District's Governing Board adopted a Resolution which formally requested that the Bureau of Automotive Repair (BAR) add additional cities and zip codes to the Central Valley's Enhanced Smog Check Program. Further, in an August, 2001 letter, the California Air Resources Board (ARB) requested that BAR implement an Enhanced Smog Check program in those urbanized regions of the state that potentially reached a population threshold of greater than 50,000. One of these regions reaching such a population threshold included the City of Temecula in Riverside County. Additionally, in February 2002 the South Coast Air Quality Management District (SCAQMD) requested that BAR implement a partially enhanced Smog Check Program in selected areas of Riverside and San Bernardino County that are within their jurisdictional boundaries. As a result of these requests, BAR has added two new sites to the Consumer Assistance and Referee (CAR) program, one in Tulare County and one in Merced County. BAR is in the process of adding a third CAR site in Riverside County. These new sites were added to offer convenient service to communities in newly enhanced areas.

The request for additional cities from the San Joaquin Valley Air Pollution Control District, includes Lodi, Manteca, Merced, Tracy, Turlock, Visalia and 70 additional zip codes. The implementation date established for these new areas was May 1, 2002. One of the CAR center sites that was added is located on the campus of College of the Sequoias (COS) in Visalia. COS is a two-year California community college located on the eastern edge of the San Joaquin Valley, midway between San Francisco and Los Angeles in Tulare County. The COS CAR center is an addition to the CAR program's Region V and is serving the area south of Fresno and north of Porterville. The CAR center is currently open and operating.

To service the northern part of the San Joaquin Valley, BAR added a CAR center in Merced County. This new CAR center site is part of the Castle Airport facility. Located in the heart of the San Joaquin Valley, Castle Airport is a former Air Force base that is now used as a general aviation airport. Currently servicing the community, Castle Airport is home to an aviation museum that is open to the public. The driving time to Castle Airport is approximately 15 minutes from Merced, and 20 minutes from Turlock. The Castle Airport CAR center will be an excellent addition to the CAR program's Region I. The Castle Airport CAR center is open and providing referee service for consumers.

BAR is currently working on plans to open a CAR center in Riverside County to service the communities of Hemet, Temecula, and adjoining areas. The CAR center will be located on the campus of Mt. San Jacinto Community College in the city of San Jacinto. Mt. San Jacinto Community College is an accredited two-year institution that offers associate degrees and certificates in vocational fields, and undergraduate credit transferable to the California State University System. The city of San Jacinto is located approximately 30 miles southeast of Riverside. The San Jacinto CAR center will be an addition to the CAR program's Region IV. The opening date for the San Jacinto CAR center will be announced in the fall of 2002.

With the additional CAR centers, BAR will be better prepared to assist consumers in the recently expanded Enhanced Program areas. These additional CAR center sites may also be utilized as test-only sites until such time as sufficient test only stations are identified and operational in the newly expanded enhanced areas.

If you have any questions, suggestions for this column or would like more information on the Referee Program, please call 1-800-622-7733 and ask to speak with the editor of the Referee Corner.

Editor's Note: The Department of Consumer Affairs (DCA), Bureau of Automotive Repair (BAR) administers the Smog Check Referee Program throughout California. The Community College Foundation (CCF) manages the Program for BAR at more than 30 community colleges. This column reflects the viewpoint of CCF as the Program Manager. It will be a regular feature in the Smog Check Advisory. ■

TWO CAP STATIONS PROSECUTED: CHARGING FOR REPAIRS NOT NEEDED OR PERFORMED

The Consumer Assistance Program (CAP) announced that two CAP stations were disciplined for charging for repairs not needed or performed. Acting Chief, Patrick Dorais warns all Smog Check stations to be honest with consumers and the State.

In one instance, the Santa Barbara County District Attorney and the State Attorney General prosecuted John Richard Helliwell, owner of Smog and Go, located in Santa Maria (ARD # AG161737). The investigation, conducted by BAR's Enforcement Division, included the inspection of 13 vehicles where Smog and Go performed state-subsidized repairs, under the Consumer Assistance Program (CAP). As part of the administrative and criminal settlement, Mr. Heilliwell's licenses were permanently revoked. He was required to repay the BAR over \$18,000, which included a reimbursement for CAP repairs of \$2,643. Mr. Heilliwell was placed on three years felony probation, given credit for jail time served and ordered to perform community service.

In another instance, James O'Neal, owner of Protech Automotive Specialists (formally Sun City Unocal 76), located in Quail Valley (ARD # AK185711), charged CAP for unnecessary repairs on two vehicles. Mr. O'Neal's Smog Check station license was revoked, stayed, and placed on five years probation. His Automotive Repair Dealers registration and Smog Check Station were suspended for 30 days. He was also required to reimburse the State over \$7,500 and repay the CAP and consumers an additional \$410. In both instances, the BAR's Bakersfield and Riverside enforcement staff substantiated numerous instances where Smog and Go and Protech Automotive Specialists recommended

repairs not needed, or charged the State for repairs not performed.

The BAR conducts an aggressive enforcement program to prevent the state from being falsely charged for state subsidized repairs through its CAP program. CAP Program Manager Michael Lafferty, stated: "The BAR has a fiduciary responsibility to administer an honest and effective repair assistance program. Technicians are expected to be competent and honest in their dealings with consumers and the State. CAP stations suspected of cheating the state will be investigated. We're not going to allow a few dishonest CAP stations to spoil this highly successful program for everyone else. The CAP program is too important for low-income and Test-Only Directed folks and for clean air! Lafferty added that over 300 CAP stations provide quality repairs. Consumers get repair dollars to assist in repairs, and a better running car. Honest and competent stations get smog check repair business; and Californians get cleaner air. He was quick to add that the CAP unit and the enforcement staff aggressively monitor station performance and follow up on consumer complaints."

"Protecting the integrity of the Program is how we support the honest CAP stations", said Mark Rubin, CAP's Enforcement Coordinator. The BAR has 8 field representatives that perform regular inspections on CAP stations and investigate those stations that are suspected of improper activities. In addition, follow up vehicle inspections are conducted through a Vehicle Repair Verification (VRV) program and a consumer survey process. ■
